### Hospitals

The healthcare industry encompasses many entities providing medical services including hospitals, urgent care and medical centers, laboratories, pharmacies, MRI facilities, and doctor's offices. Providing medical care has evolved into an information-intensive process requiring access to shared information. Hospital waiting rooms, patient rooms and doctors offices offer a unique opportunity to keep visitors entertained and comfortable. Often, visitors spend much time in a patient's room with nothing to do while the patient rests. In the comfort of their bed, a Patient can surf the net, check email, send email to family and friends, and keep in touch with the outside world.

With healthcare cost containment measures in place around the world, average wait times in hospitals has increased dramatically. By providing high speed internet in your waiting room you can keep clients happy and gain an additional revenue source in the process. A location can be used to drive targeted advertising, stream videos, play games or surf the net. Children can use it to play games, adults can use it to keep in touch with the office. Each location can be remotely monitored and can offer a combination of free and paid access.
